

A series of light blue curved lines on the left side of the slide, all converging towards a small dark blue dot that serves as a bullet point for the title.

LangSmith: The platform for reliable agents

Daniel Dato-on

Agents are a new kind of software

Inputs to agents
are very wide

Outputs are
non-deterministic
and infinite

The diagram illustrates the Agent Development Lifecycle as a continuous loop. It features four light blue rounded rectangular boxes arranged in a square: 'Build' at the top-left, 'Test' at the top-right, 'Deploy' at the bottom-right, and 'Monitor' at the bottom-left. These boxes are connected by a dashed light blue line that forms a circle around the central text. Four arrowheads on this dashed line indicate a clockwise flow: from Build to Test (top), from Test to Deploy (right), from Deploy to Monitor (bottom), and from Monitor back to Build (left). The entire diagram is set against a dark blue background with a large, faint light blue arc framing the central elements.
